Summary

Computer Science student specializing in Cyber Security with a strong interest in software development and problem-solving. Skilled in Python, C++, JavaScript, SQL, React.js, and Node.js, with hands-on experience building full-stack applications, browser extensions, and AI-powered solutions. Enjoy building real-world projects, integrating APIs, and creating secure, user-focused software. Eager to apply my technical skills and continue learning in a software engineering role.

Skills

Programming Languages: Python, C++, JavaScript, SQL

Frontend Technologies: React.js, HTML5, CSS3, Tailwind CSS

Backend Technologies: Node.js, Express.js, Flask, Streamlit, REST APIs

Tools & Technologies: Git, GitHub, MongoDB, Firebase, Linux, VS Code, Wireshark, Nmap

Internship

Virtual Internship – Full Stack Web Development (MERN) | *Edunet Foundation* | *EY GDS* Feb 2025 – Mar 2025

- Acquired hands-on experience with the **MERN stack** through a **6-week** structured learning and project-based internship.
- Built frontend features using **React.js** and explored backend functionalities with **Node.js** and **Express.js**.
- Engaged in weekly milestones, mentorship sessions, and masterclasses to strengthen web development and problem-solving skills.

Projects

NeuroVoice AI | *Python, DistilHuBERT, XGBoost, Streamlit* GitHub

- Architected a hybrid Speech Emotion Recognition system using DistilHuBERT, eGeMAPSv02, and XGBoost for voice-based emotion analysis.
- Achieved **76.7% holdout accuracy** with speaker-independent GroupKFold validation on the RAVDESS dataset.
- Developed a real-time Streamlit dashboard with emotion, stress, and acoustic visualization features using Plotly.

Real-Time Phishing Detection Browser Extension | *Python, Random Forest, REST APIs* GitHub

- Built a production-ready browser extension that classifies URLs in real-time using a Random Forest model trained on **15,000+ samples**, achieving **97.99% detection accuracy**.
- Integrated Google Safe Browsing and VirusTotal APIs, leveraging a **15k+ URL** Kaggle dataset for fallback detection.
- Automated real-time alerts to notify users of suspicious websites.

GitHub Analytics Dashboard | *React.js, Node.js, MongoDB, GitHub OAuth, REST APIs* GitHub

- Built a full-stack dashboard with **React** and **Node.js** where users authenticate via **GitHub OAuth** and view insights like commit streaks and tech stack evolution not natively available on GitHub.
- Implemented **MongoDB-based API response caching** to reduce redundant GitHub API calls, with a live/cached freshness indicator in the UI demonstrating rate limit handling and system-level optimisation.
- Shipped a public profile search feature enabling lookup of any GitHub user's contributions, open-source activity, and repository analytics without authentication.

Education

SRM University, Ramapuram 2022 – 2026

B.Tech in Computer Science Engineering (Cyber Security)

Current CGPA: 9.06

Volunteering

- Assisted in organizing for “**Brand Artistry**” at **SRM Texus 2024**, facilitating poster and logo design challenges while ensuring smooth event execution.
- As part of **CHiPSET Club** at SRM, helped organize “**Hello Hackers V9.0**”, an ethical hacking workshop featuring live demonstrations and cybersecurity awareness sessions with over 150+ participants.
